DETAILED ACTION

Response to Amendment

1. This action is in response to the amendment mailed May 13, 2003.
Claims 9 and 10 were amended and claim 12 was added, rendering claims 9-12 pending.

Claim Rejections – 35 USC § 103(a)

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akiya et al. (U.S. 4,758,461).
4. Akiya discloses an ink jet recording paper having excellent ink absorptivity (column 1, lines 6-10) and enhanced coloring density (column 6, lines 21-22). Akiya discloses the recording paper comprises mercerized pulp such as LBKP and NBKP (column 3, lines 58-61) which are hardwood bleached kraft pulp and softwood bleached draft pulp, respectively. The reference discloses the paper is coated (column 31-40 and column 4, lines 33-38) which is not applied for improving ink absorption. Suenaga does not disclose the liquid transfer length in the Bristow method as being 100 mm or less.

Art Unit: 1774

The determination of the liquid transfer length by Bristow's method is according to J. Tappi No. 51-87 is a product by process limitation. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 227 USPQ 964, 966.

Akiya does not show that the ink jet recording paper has a weight percent of the mercerized pulp as in instant claim 9. However, such weight percentage is a property which can be easily determined by one of ordinary skill in the art. With regard to the limitation of the weight percent, absent a showing of unexpected results, it is obvious to modify the conditions of a composition because they are merely the result of routine experimentation. The experimental modification of prior art in order to optimize operation conditions (e.g. weight percentage) fails to render claims patentable in the absence of unexpected results. The aforementioned limitation is optimizable as it directly affects the integrity and resiliency of the recording paper. As such, they are optimizable. It would have been obvious to one of ordinary skill in the art to make the recording paper with the limitations of the weight percentage since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 USPQ 215 (CCPA 1980).

Response to Arguments

5. Rejection made under 35 U.S.C. 112, second paragraph has been withdrawn due to Applicant amending claim 10 to overcome indefiniteness. Rejection made under 35 U.S.C. 103(a) as being unpatentable over Suenaga et al (U.S. 6,133,170) in view of Kondo et al (U.S. 6,000,794) and WO 99/00541 in view of Kondo et al (U.S. 6,000,794) are moot based on grounds of new rejection. Additionally, the Declaration of Y. Tomotake is acknowledged; however, is rendered moot based on grounds of new rejection.
